

## **MICROCOOL NorthPole XE whisper extends its compatibility to the 479 Aopen socket series i915 motherboards**

Rome, January 16th, 2006 – MICROCOOL, a leading company in the industry for motherboard heating management systems, extends the compatibility of the NorthPole XE whisper cooler, a cooling system for Northbridge and Intel® Pentium® M processors, to the Aopen i915GMm-HFS and i915Ga-HFS motherboards.

Microcool has designed a new clip that enables the installation of the NorthPole XE whisper on Aopen socket 479 series i915 motherboards. In this way, the new Microcool sink, an evolution of the NorthPole, is fully compatible with the unique Aopen connecting system for socket 479 sinks.

Such extended compatibility allows cooling both the Northbridge and the Intel® Pentium® M processor on Aopen i915GMm-HFS and i915Ga-HFS motherboards, ensuring perfect heat management in any conditions of use and an overall operating noise well below 18dB.

Microcool NorthPole XE whisper is even more a winning solution for SFF PC and HTPC.
